P002

NO. 005

Jean fonter,

here is Part III, except for the ECU section that will follow later today. As you will see I have not always followed Joly's suggestions. I have certain reservations on a majority rule being adopted in the ESCB Council in stage II. Things were a lot easier if at least for certain things unanimity still held (e.g. decisions taken within "thirdly" and "fourthly" of par. 20). We could perhaps discuss again this point in Brussels next week.

Please let us discuss on the phone any point you may want to change on this text.

> Paragraphs and sections will have to be renumbered. I start now Part II. Best regards,

ounce

Mr. Gunter BAER Bank for International Settlements 2, Centralbahnplatz 4002 BASEL CONDITTER FOR THE STUDY OF ECONOMIC AND MONETARY UNION

III. Lowerds economic and monetary union

CSENU/11/89

21 Jos February 1989

1. Principles governing a step-by-step approach

1. The request made by the European Council to the Committee to study "concrete steps" reflects the awareness that an economic and monetary union, as outlined in Part II of this Report, is too profound a change in the economic and institutional structure of the Community to be realised at one stroke. Households, corporations, unions and public administrations will need time to adapt their economic behaviour to a new setting. Similarly, it will not be possible to **previous** to the Community at once in all fields. Rather, it will be necessary to build on success and to retain the possibility of correcting the course of action in the light of new experiences.

The ambition but close the complexity of the final objective $ff = f + \chi + f$ present on the local to foregreen economic and monotory unification. The first of the first of

In <u>designing a stop-by-stop approach</u> along this path the general principle of subsidiarity, referred to earlier in this Report, as well as a number of further considerations will have to be taken into account.

2. Discrete but evolutionary steps. The process of implementing economic and monetary union will have to be divided into a limited number of clearly defined stages. Each stage will have to represent a significant change with respect to the proceeding one. New arrangements coming into force at the beginning of each stage will gradually develop their effects

Q Steps (not to repeat "stage" that is in the litle of fast I)

Revision 21st Fel 89

and bring about a change in economic reality so as to pave the way for the next stage. This evolutionary development within cash stage will apply to ______X both functional and institutional arrangements.

3. <u>Parallelism</u>. Parallel advancement in economic and monetary integration is *m* indispensable *preroquisite* for the avoidence of *m* × imbalances which could cause economic strains and loss of political support for the continuing process of developing the Community into an economic and monetary union. Perfect parallelism, however, at each and every point of time is impossible and could even be counterproductive. Already in the past the advancement of the Community in certain areas has gone hand in hand with temporary standstill in others, thus involving *process* of only *m* × partial parallelism. A certain amount of temporary deviations from parallelism is part of the dynamic *prolutionary process* of the Community. However, parallelism has to be maintained in the medium term.

4. <u>Calendar</u>. The conditions for moving from stage to stage cannot be defined exactly in advance. They depend on too many factors to permit the setting of explicit deadlines. The timing of, especially, the move to irrevocably fixed exchange rates will have to be judged in the light of circumstances by the Council, the Commission and the European System of Central Banks (ESCB), which will have been created in the second stage. A clear commitment to the final stage, as described in Part II of this Report, is however indispensable. There should be a clear indication of the timing of the first step. It could begin (soon after the political decision to draw up a new Treaty has been taken, but at the latest) when the Directive for the full liberalisation of capital movements comes into force on 1st July 1990. [It might be envisaged that this first stage will be complated with the implementation of the single market at the end of 1992.]

5. <u>Indivisibility and arradualliss</u>. As has been said about, progress chould be both evolutioners, and step by step. There the to be a below of the second of the second

- to avoid + + further

Gradual progress in should step-by-step fashion should not generate

organ or institution) has "the last word," there is a risk of market uncertainty and policy conflict.

an new for a cing desinition of uternation of its respons the lity of heightened by the fer the Cin the farmers Pot interret Bon an erising novers Quhich are prently on the Bund on ation amorison, with have to be attributed so Commentry Section The med prombent stample In this response is medetary pility. med exchange rates are irrevocably locked - as was pointed out in Part II of the Report - a common monetary policy is required and will have to be formulated collectively in the framework of the European System of Central Banks. As the authority over monetary policy cannot be shared out among several autonomous decision-making bodies, the transfer of responsibility for mongerary policy from national central backs to phe ESCB must be made in one sproke; moreover, because all operations in domestic money markets and/ intervention in the foreign exchange market affect monetary conditions, there is be possibility of gradually banding ver only certain posicy functions or instruments. This implies that until exchange rates are locked the ultimate decision-making power over each Community currency will rest with the respective national central bank.

At the same time, however, if the objective of economic cohesion and the attainment of progressive enchange rate stability is not to be put in poparity, the extent to which the national decision making power can be exercised in practice will be increasingly constrained for all central bunks and by force of events will have to take place more and more in a transvork of close co-operation and co-ordination. As suggested in the description of concrete steps, followeration can be greatly strangthened long before the responsibility for mantany policy is escuelly transformed

6. <u>Participation</u>. There is one Community, but not all the members have participated fully in all its aspects from the beginning: So far this has mainly been the consequence of successive enlargements and, for the ENS, of the decision of some countries not to join the exchange rate agreement. A consensus on the final objectives of the Community, as well as participation in the same set of institutions, should be muiotained, while allowing for a degree of flexibility concerning the date on which some member countries join certain arrangements. The management of each set of Policy functions are not lequally divisibile in al areas.

SIn the budgetan field palic, functions can be and are shared between different levels of government in all the constitutional systems. This facilitates a step-by step approach to economic and more tary union.

arrangements should be the responsibility of those who fully participate in

2. The 1

it.

The Treaty

7. The implementation of economic and monetary union must, in accordance with Article 102A as introduced into the EC Treaty by the Single Act, be embodied in a new Treaty. This Treaty will provide the legal foundation on which the institutional framework of, and concomitantly the distribution of policy responsibilities in, an economic and monetary union, as described in Part II of the Report, will be based.

The Committee has examined the scope for progress in the economic and monetary integration under the legal provisions as they are inforce in each member country. This investigation has shown that unless national legislations were amended in various respects, there exist nerrow bounds for further action on the part of national authorities: no member country is able to transfer decision-making power to a Community body, nor is it possible to set up arrangements for a binding ex ante conomic and monetary union will have to be confined to measures strengthening co-operation, mutual surveillance fend- analysis of developments and non-binding co-ordination of policies until a new Treaty has been ratified by off member countries

A. One procedure would be to conclude a new Treaty each pinet to clicit the marking that it clearly because at each step the political beamismont is that it clearly because at each step the political beamismont its disadvantage is that, as well as being unwieldy and slow, the overall consistency of the process may not be sufficiently safeguarded and sight may be lost of the ultimate objective. It also carries the risk that progress in parallel between the monetary and non-monstary sides would not be respected.

charge considerations suggest that a none ampetitude entropies charge to conclude a single comprehensive Treaty which would formulate clearly the essential features and institutional arrangements of economic and mometary union and the steps in which it can be achieved. Such a Treaty could fecilitate the implementation process through the provision of

on this basis it could 8615

+ could

"organic laws" and enabling clauses and it could also indicate the procedures by which the decision will be taken to move from stage to stage. Each move would require an appraisal of the situation and [unanimous] political agreement. [Should unanimity be adopted as the rule for all the stages? Who should participate in the decision? The European Council may have to take the final decision, but what say will the organs of the economic institution and monetary institution respectively have in proposing, or giving advice on, the decision?]

3. Concrete steps in three stages

9. The Committee is of the view that the evolution towards economic and/monetary union **bouid** be divided into three major stages. In each stage a number of concrete and parallel steps would be implemented in the <u>institutional</u>, economic and monetary field which would advance the process of integration, ensure the gradual construction of the institutional framework and reorganise policy responsibilities in accordance with the requirements of an economic and monetary union.

10. Both strategical considerations and actual economic developments **/X** call for a particularly careful design of the <u>first stage</u>. Firstly, in order to impart a strong momentum to the process of economic and monetary union, and to underpin its credibility, there must be a clear and convincing political endorsement of the final objective reflecting the common political will of mit; Community countries. Secondly, it must be **f**-**/X** taken into measure that the implementation of the single market programme curvently under way will strongly affect the accountic environment in the Community. In particulari

- the complete liberalisation of capital transactions by the middle of 1996 is an irreversible process in which the European countries are already engaged. There is a maximum risk that in the absence of an emplicit procedure to determine the everable memotary policy stance in the Counseity, notional memotary policies will be mubjected to different constraints. [In order to avoid such differences it is necessary that the central banks participantary in the UND transform unstrary policy co-ordination

(Section on the E co (it will be (it will be paxed later)

CO.

SEGR. PARTIC

from an ex post to an ex ante exercise at both internal and external levels;] or alternatively [in order to cope with these Similarly, it will be essential to develop problems it is necessary that the central banks participating in the EMS significantly strengthen monetary policy co-ordination procedures to ensure that budgetany policies are consistent with exchange late com-mittments; at both internal and external levels;] - the sizable fluctuations within the international monetary system have led central banks to rely more heavily on intervention in the foreign exchange markets on a co-ordinated basis. However, such a policy inevitably has a direct influence on the implementation of domestic monetary policies in these countries. It is therefore necessary and urgent that central banks create means for analysing such issues on a permanent and common basis. It is not only a matter of strengthening the impact of their operations, but also of maintaining the efficiency of their monetary management both at domestic and European levels; In addition, the creation of a single financial area - the tendency of the European central banks to conduct in the framework of the ENS their monetary policies with regard to domestic considerations in their respective countries is not within the context of 6 necessarily conducive to fostering a monetary policy 1992 programme will satisfactory for the Community as a whole The creation of a firther crade the signifi-cance of national movecommon monetary think-tank for analysis and recommendations would make it possible to address this problem better. The deliberations within this monetary think-tank would in effect provide all the central banks with a better basis for setting tary targets. their own national approaches in a European context while preserving full decision-making autonomy.

The desirability of a clear demonstration of a compon political will and the challenges of market integration call for substantial and effective property at the beginning of Stogs I, sithough, as noted earlier, & the scope for provotical measures will be limited as long as a new Treaty has not yet been ratified. For this reason it is crucial that Stage I is introduced by the political decision to subark immediately on, and to ramified as quickly as passible, intra-governmental negatiations on a treasprese well as a set of concrete measures simed at effectively for policy or operation and co-ordination. In summary, the first

- Mala (UL) - such

stage is characterised by two principal feacures: the decision by the Heads of State and Governments to commence negotiations on a new Treaty and various steps designed to improve policy co-ordination within the framework of the existing institutional arrangements. The responsibility for policy decisions as well as the operational procedures for implementing policies would remain unchanged.

11. The second stage would begin efter the Treaty has been put into effect. This would involve the construction of the institutional framework of the economic and monetary union and, where envisaged, a gradual transfer of operational functions to the Community institutions. This stage would be characterised primarily by a training process leading to a collective decision-making, without, however, yet abandoning the ultimate responsibility for policy decisions at the national level.

12. The <u>final stage</u> would commence with the move to irrevocably locked exchange rate and the attribution of those competences to Community institutions that have been described in Part II of the Report. In the course of the final stage the national currencies would eventually be replaced by the use at the Community's sole currency.

4. The principal steps in stage one

13. In the institutional field this stage would involve the proparation and ratification of the Treaty on the economic and monetary union, with a procedure similar to the one followed for the Single European Act. The decision to draw up a Treaty would be coupled with an official Annuacement that the ECH contract, the currency of future mometary union in Europe.

14. In the economic field the steps small centre on the completion of the internal market programme, the reform of the Community's periodel policies and efforts to strengthen presentimeters in policies budgetary policies in perioder, there easily the Firefly, the top to be the LO

mandate of the Committee of Central Bank Commandity a use facision giving the Committee greater authority and visibility and making it the forerunner of the Council of the European System of Central Banks to be created under the new Treaty. The thrust of the revision <u>Concentration and monetary</u> policy mong all member countries of the Commity. To this end, the Committee would **Manager** :

- formulate recommuniations on the overall orientation of nometary and exchange rate policy, as well as on measures taken in these fields by individual countries. In particular, the Counittee would be consulted in edvance of national decisions on the course of monetary policy, such as the setting of annual domestic monetary and credit targets. The Counittee could declare publicly, in the event of speculative capital flows unvarianted by fundamentals or undarlying monotary policy, that the European central banks Pimplementing financial integration End

but an effort would be made by every country to make the functioning of other adjustment mechanisms more effective. Actions would develop along several lines.

Firstly, through the approval and enforcement of the necessary Community directives, full implementation would be given to the objective of a single financial space in which all monetary and financial instruments would circulate freely and banking, securities and insurance services would be offered uniformly throughout the area.

Secondly, efforts would be made to include all Community currencies in the EMS exchange rate mechanism. The same rules would apply to all the participants in the ERM.

& SThirdly, all Fwould be replaced

stood ready to count these capital flows by interventions;

- make policy recommendations to individual governments and the Council of Ministers on non-monetary policies that could affect the internal and external monetary situation in the Community, especially the functioning of the EMS. The outcome of the Committee's deliberations could be made public

the Committee's opinions and recommendations would not have to reflect unanimity, but could be established by a qualified majority; the recommendations would not be binding;

set up three committees (supported by a permanent research staff) which would report regularly to and advise the Committee of Governors. A monetary policy committee would define common surveillance instruments, propose harmonised objectives and help to develop gradually a process from expost analysis to an ex ante approach to monetary policy disconsed a foreign exchange policy committee would monitor and analyse exchange market developments and assist in the search for effective intervention strategies; [should these two committees possibly be merged into a single one] a committee on banking supervision would undertake regular consultations on matters of common interest in this field;
submit an annual report on its activities and the monetary situation of the Community to the European Parliament.

16. A number of Committee members advocated the creation of a <u>European Reserve Fund (ERF)</u> that would foreshadow the future European System of Central Banks. The main objectives of this institution would be:

> to serve as a training ground for implementing a better co-ordination of mometary analysis and decisions;

- to facilitate, from a Community point of view, the concerted management of exchange rates and pressure to intervene visibly fin third and participating currencies) on the foreign exchange member upon request of the participating central banks;

Pand the President of the Committee would be entitled to publicly express the opinion of the Committee on more tary matters

Pand instruments H cooperation;

- possib

in order to facilitate an integrated approach to moultary policy? Finally, efforts would be made to increase the independence of national central banks.

- to be the symbol of the political will of the European countries and therefore reinforce the credibility of the process towards economic and monetary union.

The resources of the Fund would be provided by a pooling of a limited amount of reserves (for instance 10% at the staft) by participating central banks and require a permanent structure and staff in order to achieve its tasks, i.e.:

- management of the pooled reserves;

interventions on the exchange markets decided by the members;
analysing, from a collective perspective, monetary trends in order to enhance policy co-ordination.

All EC central banks would be eligible to join the Fund. However, membership would be subject to their participation in the exchange rate mechanism, the reason being that the EMS implies specific constraints on monetary policy and foreign exchange interventions that both require a common approach of the central bank concerned.

The management of the fill would consist oft

- a Board of Directors which would comprise automatically the Governors of each central bank participating in the ERF; an Executive Committee whose members would be selected by the Committee of Governors on the basis of competence. This Executive Committee would be of a small size, consisting of three or four members who would have direct responsibility for the different departments of the ERF;

the two Committees: a Foreign Exchange Policy and a Monetary Policy Committee;

two departments: a Foreign Exchange and Reserves Management Department, and a Monetary Policy Department.

17. Other mambers of the Committee felt that the creation of a HMF was not opportune at this stage. Their reservations stem from the fact there

in come the grant is printed by a strain

too much emphasis is placed External considerations, giving support to the illusion that common interventions by such a Fund could be a substitute for economic adjustment to correct imbalances within the Community or would offer individual countries more leeway in their domestic monetary policy;

the proposal involved an institutional change which, in accordance with Article 102A of the amended EC Treaty, would fall under the stipulated procedure of Article 236 and require a new Treaty; the setting-up of the Fund under the same procedures that were applied to the establishment of the EMS was not considered possible;

it would be counterproductive to set up a new institution for a limited period of time, in particular if most of the functions of the Fund could be performed by a strengthening of the Committee of Governors;

it would institutionalise the separation of the Community into two groups of countries.

However, the Committee members opposed to the immediate creation of the ERP could envisage some pooling of reserves and intervention epurations at a later stage, but before the definite locking of parities.

5. The principal steps in stage two

18. In the institutional field the basic organs and structure of the acconomic and monetary union would be built in accordance with the Treaty, involving both the revision of existing institutions and the establishment of new ones. The institutional framework would gradually take over sparational functions, serve as the centre for monitoring and jumphysic of macro-economic developments and promote a process of common decision-making, although the ultimate policy responsibility would still remain in the hands of the national authorities.

19. In the economic field the Council of Ministers and the Commission future involvement of the European Parliament? | would assume a greater rate in premoting convergence and co-ordination of economic policy in the Community. To this and the following steps would be takene

an alternative way to proceed would be to conclude an intergovern. mental agreement setween the concerned member countrie. The

20. In the monetary field the European System of Central Banks having all the principal features described in Part II of the Report would be set up and absorb the previously existing institutional monetary arrangements (ENCF, Committee of Governors, the committees for monetary policy analysis, foreign exchange policy and banking supervision, and the permanent Secretariat). The most important feature of this stage is that the functions of the ESCB in **Amont important** feature of this stage is that the functions of a common monetary policy would gradually evolve as experience is gained, important of adjustment, but there would the realignments would remain an instrument of adjustment, but there would the entertaining that the frequency and the extent of realignments about be continuously reduced.

Thirdly

Finally,

Whithe course of this stage the SSGB would become the interface between the national central books and the Community's money markets, with the entire mometary operations of individual national central banks being reflected in their transactions with the fibre.
